

**LOS MORADOS  
BUILDING REPORT X**

N. Fazzini  
April 29, 2004

A lot of work has been done in the pass month, and now the construction looks like a building.  
In the following photographs, the construction sign on the road 40, the bays, the generator house, and the trench to powered the LIDAR, are shown.

Next is shown, the beginning of the concrete fence construction, and when finished.

The photograph below shows the roof beams been prepared to be mounted.

The following photograph shows the building from the main door.

**Below, a view from the beginning (at Los Leones) of the L.M. power line.**

**Fortunately, all white areas are salt, and no snow.....**
